Hello Susane,

I cced Kelley Chase, as she is filling in for me while I am deployed in PR.

Yes, the information below is accurate.

How many private wells were sampled? As of today (02/27) we have sampled a total of 41 private wells.

How many results do you already have? As of now (1425), we have received a total of 15 results back.

Is this data unvalidated? Yes, it is preliminary data.

Eduardo,

I'm preparing a PFAS spreadsheet for the RA for tomorrow. I know that results from private well sampling near Blades is coming in now. Is the info below accurate? Do you have anything else to add? How many private wells were sampled and how many results do you already have? Is this data unvalidated? Thanks for your help.

Blades Ongoing activities:

January 2018 results indicate all 3 public wells exceeded the HA. Not all private well results are available yet. As of 2/27/18 one residential well exceeded the HA and several had detections below the HA.
